

## Coventry Pharmacy Quarterly Report

The following graphics provide a visual aggregate reporting of the most recent 12 months reporting period (March 2013 – March 2014) as a baseline for subsequent quarterly reporting of data. Table 1 describes total number of prescriptions dispensed categorized as new, refills and non-preferred drug list (PDL). Non-PDL drugs are those that require prior authorization (PA) or have other restrictions applied and the total non-PDL drugs appear negligible vs total prescriptions dispensed. Table 2 shows the relationship between PAs requested, non-PDL prescriptions and non-PDL psych drugs as a percentage of the total number of prescriptions dispensed (new plus refills). Non-PDL psych drugs track closely with the percentage of PAs requested and Table 3 (Top 50 Non-PDL drug categories) shows that antipsychotics and ADHD drugs account for 44% of non-PDL drugs by reimbursement. Table 4 describes the number of PAs requested vs. the number of PAs denied and Table 5 shows the percentage of PAs denied with the range being generally less than 30%.

Analysis and Recommendations: Restrictions on drug accessibility appears minimal. No recommendations at this time.

## Humana Pharmacy Quarterly Report

The following graphics provide a visual aggregate reporting of the most recent 12 months reporting period (April 2013 – April 2014) as a baseline for subsequent quarterly reporting of data. Table 1 describes total number of prescriptions dispensed categorized as new, refills and non-preferred drug list (PDL). Non-PDL drugs are those that require prior authorization (PA) or have other restrictions applied and the total non-PDL drugs appear negligible vs total prescriptions dispensed, with the majority being vaccines and topical treatments for the first quarter of 2014 (Table 2). Table 3 shows the relationship between PAs requested and non-PDL prescriptions as a percentage of the total number of prescriptions dispensed (new plus refills) which are both very low at less than 2.5%. Table 4 describes the number of PAs requested vs. the number of PAs denied and Table 5 shows the percentage of PAs denied with the range being between 30-40% since October 2013.

Analysis and Recommendations: Restrictions on drug accessibility appears minimal. No recommendations at this time.

## Passport Pharmacy Quarterly Report

The following graphics provide a visual aggregate reporting of the most recent 12 months reporting period (March 2013 – March 2014) as a baseline for subsequent quarterly reporting of data. Table 1 describes total number of prescriptions dispensed categorized as new, refills and non-preferred drug list (PDL). Non-PDL drugs are those that require prior authorization (PA) or have other restrictions applied and the total non-PDL drugs appear negligible vs total prescriptions dispensed. Table 2 shows the relationship between PAs requested and non-PDL prescriptions as a percentage of the total number of prescriptions dispensed (new plus refills) which are both very low at less than 2.0%. Table 3 describes the number of PAs requested vs. the number of PAs denied and Table 4 shows the percentage of PAs denied with the range being generally less than 25%. Table 5, the Top 50 Non-PDL drug categories for January – March 2014 shows that specialty drugs account for 96% of non-PDL drugs by reimbursement.

Analysis and Recommendations: Restrictions on drug accessibility appears minimal. No recommendations at this time.

## WellCare Pharmacy Quarterly Report

The following graphics provide a visual aggregate reporting of the most recent 12 months reporting period (April 2013 – April 2014) as a baseline for subsequent quarterly reporting of data. Table 1 describes total number of prescriptions dispensed categorized as new, refills and non-preferred drug list (PDL). Non-PDL drugs are those that require prior authorization (PA) or have other restrictions applied and the total non-PDL drugs appear negligible and consistent vs an increase in total prescriptions dispensed over the 12 month period. Table 2 shows the relationship between PAs requested, non-PDL prescriptions and non-PDL psych drugs as a percentage of the total number of prescriptions dispensed (new plus refills). Non-PDL psych drugs track closely with the percentage of PAs requested and Table 3 (Top 50 Non-PDL drug categories) shows that antipsychotics account for 20% of non-PDL drugs by reimbursement. Table 4 describes the number of PAs requested vs. the number of PAs denied and Table 5 shows the percentage of PAs denied with the range being between 50-57% since October 2013.

Analysis and Recommendation: WellCare displays the highest rate of PAs denied compared to all other KY MCO Pharmacy Benefit Plans – see Table 6. Evaluation of impact on members is recommended.
