

# Kentucky Department for Public Health Weekly Influenza Surveillance Report Morbidity and Mortality Weekly Report (MMWR) Week 45 November 5– November 11, 2017

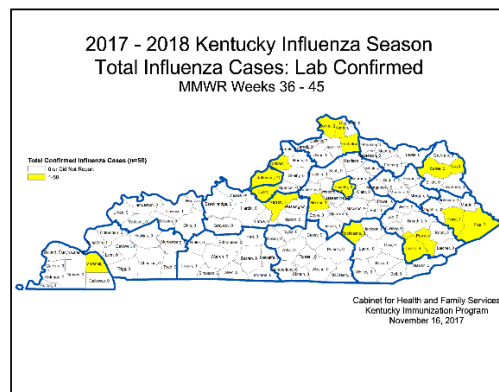

## Current Influenza Activity Level: †Regional

**†Regional:** Outbreaks of influenza or increases in ILI and recent laboratory confirmed influenza in at least two but less than half the regions of the state with recent laboratory evidence of influenza in those regions.

**\*Confirmed:** Influenza laboratory Confirmed Cases are defined by positive molecular virus (RT-PCR) or Virus Culture test results. Those positive test results are reportable in Kentucky. (Positive results for Rapid Influenza Diagnostic Tests are not included in this report)

Activity Level Range: Sporadic → Local → Regional → Widespread

Update for week 45:		Update Total for weeks 36-45:	
<b>Lab Confirmed Influenza:</b>	<b>8 Cases</b>	<b>Lab Confirmed Total:</b>	<b>59 Cases</b>
<b>Number of Regions with Long Term Care Facility Outbreaks:</b>	<b>0 of 17 Regions</b>	<b>Total Number of Long Term Care Facility Outbreaks:</b>	<b>0 Outbreaks</b>
<b>Number of Regions with Confirmed Flu Cases:</b>	<b>5 of 17 Regions</b>	<b>Total Number of Regions with Confirmed Flu Cases:</b>	<b>11 of 17 Regions</b>
<b>Deaths Reported:</b>	<b>0 (under 18 years) 0 (18 years &amp; older)</b>	<b>Total Deaths Reported:</b>	<b>0 (under 18 years) 0 (18 years &amp; older)</b>
<b>Number of Regions with Increased ILI Activity:</b>	<b>5 of 17 Regions</b>		
<b>Number of Regions with Increased Influenza Activity (see page 3):</b>	<b>2 of 17 Regions</b>

Purchase	0/3				
<b>**Total:</b>	25/94	0/17 regions	5/17 regions	5/17 regions	2/17 regions

\*\*Total number of regions reporting category of activity not total number of influenza cases

Kentucky National Electronic Disease Surveillance System (NEDSS) and U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet) Data. Department for Public Health, Cabinet for Health and Family Services, Frankfort, Kentucky, [November 5 - November 11, 2017].

National Data  
2017-2018 Influenza Season  
Week 44 ending November 4, 2017

*All data are preliminary and may change as more reports are received.*

*\*Week 45 will be available November 23rd and will be attached on the next report.*

## Synopsis:

During week 44 (October 29-November 4, 2017), influenza activity remained low in the United States, but is increasing.

- **Viral Surveillance:** The most frequently identified influenza virus type reported by public health laboratories during week 44 was influenza A. The percentage of respiratory specimens testing positive for influenza in clinical laboratories is low.
- **Pneumonia and Influenza Mortality:** The proportion of deaths attributed to pneumonia and influenza (P&I) was below the system-specific epidemic threshold in the National Center for Health Statistics (NCHS) Mortality Surveillance System.
- **Influenza-associated Pediatric Deaths:** No influenza-associated pediatric deaths were reported.
- **Outpatient Illness Surveillance:** The proportion of outpatient visits for influenza-like illness (ILI) was 1.8%, which is below the national baseline of 2.2%. All 10 regions reported ILI below region-specific baseline levels. Two states experienced moderate ILI activity; six states experienced low ILI activity; New York City, the District of Columbia, and 42 states experienced minimal ILI activity; and Puerto Rico had insufficient data.
- **Geographic Spread of Influenza:** The geographic spread of influenza in Guam and six states was reported as regional; 13 states reported local activity; the District of Columbia and 31 states reported sporadic activity; and Puerto Rico and the U.S. Virgin Islands did not report.
