# 2000 KENTUCKY ANNUAL HOME HEALTH SERVICES REPORT

## INTRODUCTION

The Health Policy Development Branch of the Division of Epidemiology and Health Planning announces the release of the 2000 Kentucky Annual Home Health Services Report. This branch, established in July 1996, is now responsible for utilization data collection and reporting required by 902 KAR 20:008. This report shows all census data, age distribution together with total patients served, and patients served by discipline and number of visits. This report is organized by county within Area Development Districts (ADD). See following page for ADD map.

This report covers the period from January 1, 2000 to December 31, 2000, for all agencies in compliance with licensing and regulation reporting requirements. All 124 agencies in Kentucky reported information for this survey.

Data in this report are organized in three sections. Section I shows beginning census, admissions, discharges and ending census by agency and county of service. Section II shows total patients served by age category, agency and county of service. Section III shows the number of patients served and number of visits for various disciplines (skilled nursing, home health aide, physical therapy, occupational therapy, and speech therapy) for each agency during 2000. The agencies are grouped first by Area Development District then by county served. **ADD totals** appear throughout the report following all county data for each ADD. **Statewide totals** appear at the end of each section. In addition, Section IV contains information and changes regarding individual agencies during the year.

**This report now becomes the most recent official data on home health services utilization published by the Cabinet for Health Services.** For additional copies of this report, please submit a request in writing along with a check in the amount of \$10 made payable to the Kentucky State Treasurer to:

Health Policy Development Branch

## Home Health Services Report Summary

Changes in the home health industry that began in 1999 appear to continue to affect service utilization in 2000. Changes in federal regulations changed reimbursement for agencies and forced agencies to alter business practices. Closures, mergers, and sales of agencies have been more prevalent.

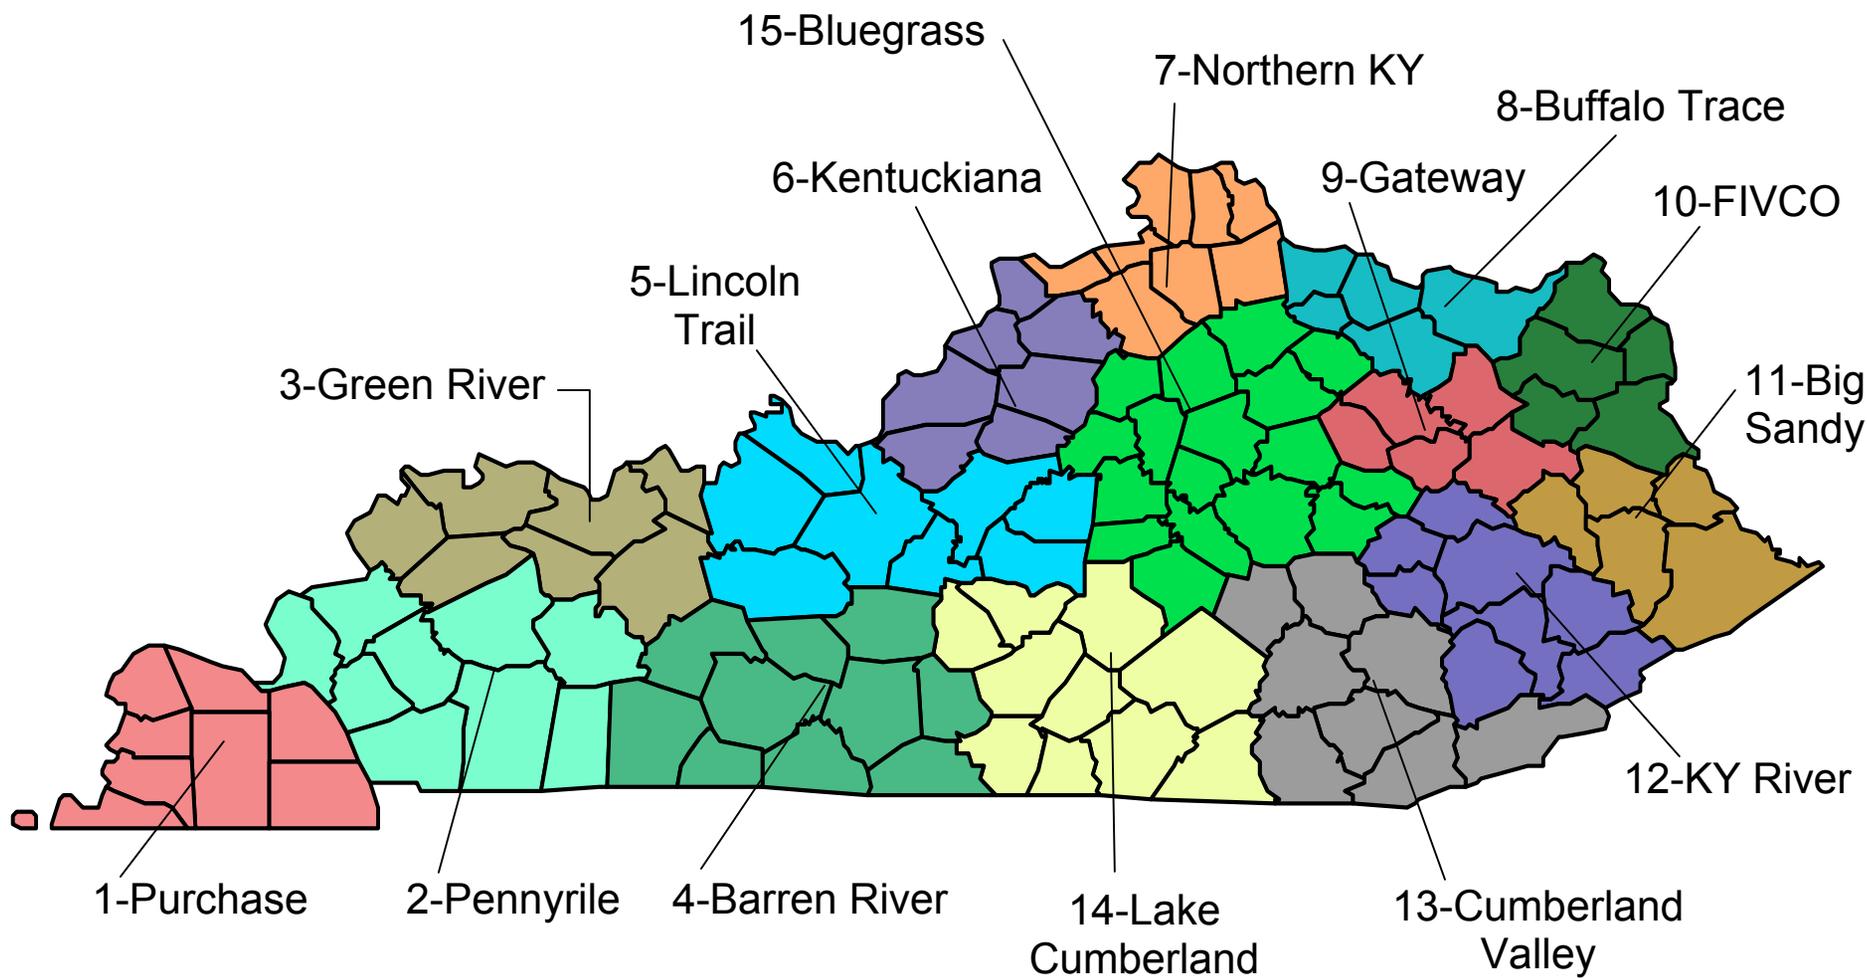

The number of home health patients served in 2000 was the lowest in the last five years. Kentucky home health agencies served only 96,175 patients this year as opposed to 99,130 in 1999. This is the lowest number of patients served since 1995 and well below the 6 year average (1995-2000) of 104,825 patients served. The number of patients served increased from 1995 to 1996 by almost 13,000 patients then rose again in 1997 before declining in both 1998, 1999 and again in 2000. (See Chart on following page.)

When looking at the Area Development Districts (ADDs) individually, six of the fifteen ADDs showed an increase in patients served from 1999 to 2000. In addition, five ADDs served more patients in 2000 than the six year average for that ADD. While the total number of patients served statewide has continued to decrease, the higher numbers of patients served in these ADDs shows specifically how service utilization across the state is changing. Further analysis of these ADDs is warranted.

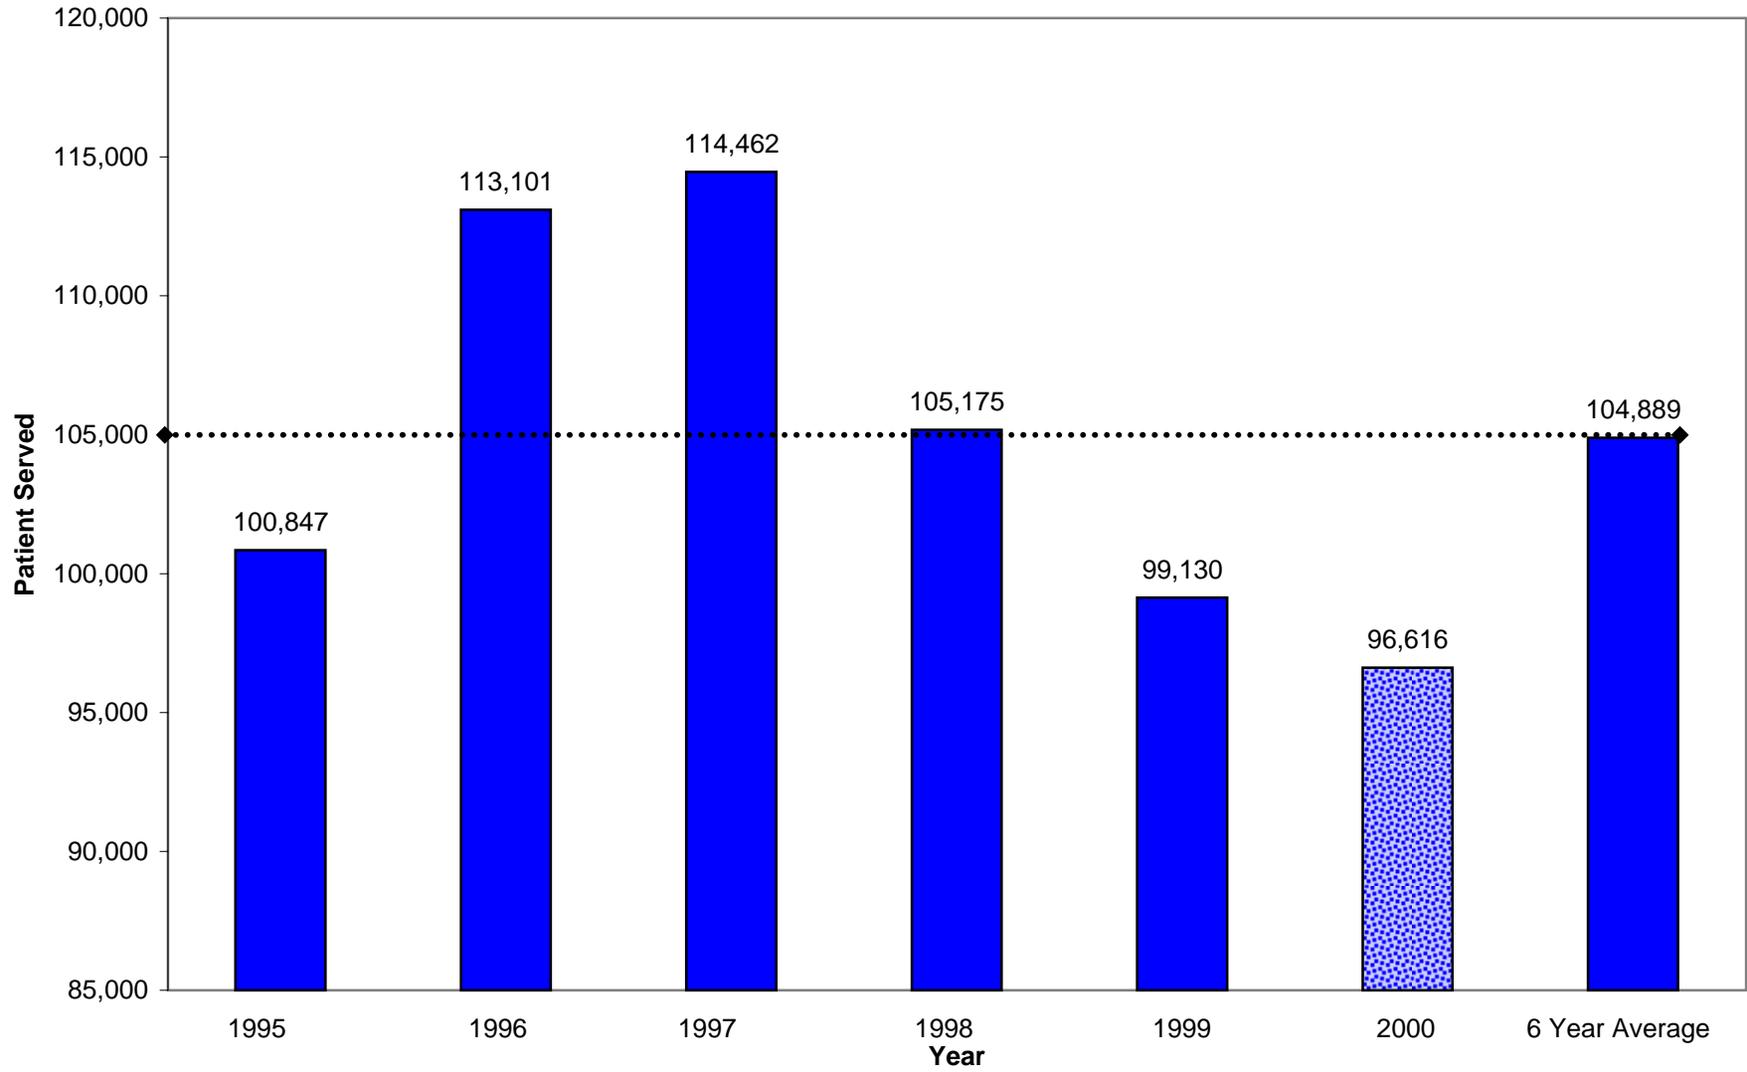

When examining the ages of home health patients in 2000, data shows that the largest population of patients of home health services was from ages 75-84 consisting of 25% of the total patients in 2000. Patients age 65-74 and 45-64 made up 20% of all patients served in each cohort. Patients over 85 years of age made up 15% of the total number. These figures seem logical since it is expected that as people age, they will require more health services. However, there are less people in the over 85 age group in the total population and many of these may require higher levels of care than can be provided by home health agencies. Analysis of the age distribution among home health patients from 1995 to 2000 shows change over the past six years. The 45-64 age group has increased in proportion to the other age cohorts. This observation is expected since the 2000 Census data shows that the 45-54 age cohort has increase more quickly over the past decade than any other age group. The 55-59 age cohort also grew at about the same rate as the over 85 population. These three age groups grew far more quickly than any other age group.

Charts representing the data discussed in this summary are presented on the following pages.
