Section I – Program Description

Objective & Rationale

Kentucky is requesting approval from the Centers for Medicare and Medicaid Services (CMS) for an amendment to its Medicaid KY Health 1115 Demonstration to authorize federal Medicaid matching funds for the provision of substance use disorder (SUD) treatment to eligible incarcerated members. Coverage for these services is requested for persons incarcerated in state and county facilities.

Addiction, particularly opioid use disorder (OUD), remains one of the most critical public health and safety issues facing the Commonwealth of Kentucky. Over the past decade, the number of Kentuckians who die from drug overdoses has steadily climbed to a peak of more than 1,400 in 2017, exacting a devastating toll on families, communities, social services and economic growth. Despite observing the first decrease in overdose deaths in 2018, drug overdose fatalities remain above the national average, with Kentucky ranking 9th highest in the United States.

Kentucky is among the states that have been most impacted by the opioid epidemic. To combat the opioid epidemic, Kentucky has made far-reaching executive, legislative, and judicial policy changes to address the opioid epidemic. Over the previous 15 years, many of these reforms have focused on criminal justice initiatives. As will be discussed later, Kentucky utilizes drug courts, “rocket dockets”, alternative social worker sentencing programs, and other diversion mechanisms to redirect as many justice-involved members as possible away from longer sentences of incarceration.

Furthermore, Kentucky has made substantial steps in recent years to offer a full continuum of SUD treatment within the Medicaid program. Without Medicaid funding, a dedicated staff at Kentucky’s Department of Corrections (DOC) has managed to increase SUD treatment slots from 300 to almost 3,000. However, despite the advances that have been made, a substantial population of members remain untreated in Kentucky’s jails and prisons. Kentucky is proposing with this amendment that current in-prison initiatives are enhanced and that additional treatment capacity is created and funded.

Research shows that of the 2.3 million people in American prisons and jails, more than 65% meet the criteria for addiction. The relapse rate for substance use disorders is estimated to be between 40% and 60%. This rate is similar to rates of relapse for other chronic diseases such as hypertension or asthma. Releasing members who were incarcerated without connections to healthcare providers, medical coverage, safe and stable housing, or a support system can greatly increase their risk of relapse, overdose, and death. It has been estimated that members returning to the community after

---

incarceration are 12.9 times more likely to die from an overdose than the general population.³

Drug treatment studies for in-prison populations find that when programs are well-designed, carefully implemented, and utilize effective practices they:

- reduce relapse
- reduce criminality
- reduce recidivism
- reduce inmate misconduct
- increase the level of the individual’s stake in societal norms
- increase levels of education and employment upon return to the community
- improve health and mental health symptoms and conditions
- improve relationships²

Currently in Kentucky, approximately 23,071 men and women are incarcerated under the authority of DOC. Treatment allotment for SUD is approximately 2650. The Medicaid recipient incarceration total, as of June 22, 2020, is 6,217. The approval of this amendment will allow DOC to increase the allotment for SUD treatment within all facilities. Also, with the approval, DOC will be able to hire more staff, engage members in treatment during incarceration and expand the ability of aftercare.

The amendment will have two (2) general objectives. First, Kentucky proposes to provide SUD treatment to eligible incarcerated members in order to ensure this high risk population receives needed quality treatment before release, and to strengthen follow up care with a Medicaid provider after release by paying for SUD treatment while incarcerated. Second, this amendment proposes to transition the incarcerated member to their chosen MCO an average of thirty (30) days prior to their release date in order to coordinate referrals and assessments to their community treatment providers. The Medicaid funding allowed by this proposal will allow for expansion of critical services to decrease relapse, recidivism, overdoses and other health concerns.

Legislative Background

The passage of HB 352 during the 2020 Regular Session requires Kentucky Department for Medicaid Services (DMS) to prepare and request a waiver from the federal government to provide some services, including peer support and SUD treatment and care navigation, to Medicaid eligible incarcerated members. In addition, DMS is operating under a general directive from HB 124 of the 2018 Regular Session. HB 124 required the Cabinet for Health and Family Services to complete a

comprehensive review of quality standards for substance use disorder treatment and recovery services and programs; specify that licensure and quality standards be based on nationally recognized and evidence-based standards, standardized outcome measures, a reporting process, and conditions for reimbursement and required the cabinet to promulgate administrative regulations to implement the licensure and quality standards.

The legislative impetus is complemented by a longstanding interest of DMS in this matter. DMS has been evaluating the possibility for a waiver or waiver amendment prior to the passage of HB 352. DMS' own study of the opportunities indicates that Medicaid eligible services would be cost-effective for the Medicaid program long term and would improve outcomes for justice involved members.

**Overview of Kentucky efforts that support the DOC population**

Substance use disorder treatment for justice involved members is a priority in Kentucky. As such, many programs and initiatives are carried out in collaboration between the Justice and Public Safety Cabinet and the Cabinet for Health and Family Services in which DMS is located with the purpose of strengthening the relationship between the care provided during incarceration and the care offered by Medicaid providers upon release.

Key to this linkage is prompt enrollment and activation of Medicaid benefits upon release from incarceration. Access to services is especially important for members with SUD, given the elevated risk of return to use and overdose death following release from incarceration4. Although Kentucky suspends rather than terminates Medicaid benefits in the event of incarceration, significant delays in reinstatement and reenrollment continue to be a barrier for service access upon release. Between 2014 and 2018, there were 30,327 incidents where members were incarcerated. The mean number of days from release to the reinstatement of benefits was 77 days and the mean number of days from release to reenrollment was 138 days. This delay is compounded by high utilization for in the 30 days following release in calendar year 2019, 25% of beneficiaries have an SUD-related claim, 20% had a primary care claim, and 12% were seen in the emergency room.

For the improvement of access to Medicaid following release from incarceration, the Commonwealth of Technology (COT), on behalf of the Executive Branch, has entered into a contract with DOC’s software vendor, APPRISS, to link incarceration data with Medicaid and other administrative datasets. The linkage and alert systems, which is set to be operational by the end of 2020, will enable the automatic suspension and activation of Medicaid following release from incarceration through Medicaid’s Integrated Eligibility and Enrollment System (IEES). This data sharing infrastructure will also facilitate tracking recovery outcomes on members released, such as employment, education and non-emergent utilization of healthcare.

---

Kentucky is also piloting efforts to improve reentry with the following goals: 1) improve outcomes for people with SUD and severe mental illness (SMI), 2) decrease recidivism; 3) overcome barriers to information exchange between Medicaid partner’s including DOC and MCOs, and 4) clarifying the actions MCO personnel can undertake, especially in working with the newly established four domain teams. The Reentry Pilot Program began in February 2018 with collaboration from the National Governor’s Association (NGA). The intervention is a four member team coordinating care for those reentering the community from the Kentucky State Reformatory (KSR) and the Kentucky Correctional Institute for Women (KCIW). The team composition includes DOC staff specifically involved in reentry services, specialized parole officers (trained to better support needs related to SMI or SUD; and having smaller caseloads), MCO reentry coordinators, and personnel affiliated with community mental health centers who are funded outside of Medicaid to assist in developing and implementing care during incarceration.

Alongside reducing structural barriers to care, Kentucky has developed and enhanced licensure and quality standards for SUD treatment and recovery. Most importantly, Kentucky implemented the American Society of Addiction Medicine (ASAM) criteria within all behavioral health and SUD Medicaid regulations. All ASAM levels of care are now available via Kentucky Medicaid as a result of this update to the regulations. The ASAM criteria is the most widely used and comprehensive set of guidelines for placement, continued stay and transfer/discharge of patients with addiction and co-occurring disorders. DMS has also worked with sister agencies to restructure the Alcohol and Other Drug Entities (AODE) licensure to incorporate DOC and the treatment of SUD while incarcerated.

Kentucky DOC and DMS also leverage a partnership with the Kentucky Department for Behavioral Health, Developmental, and Intellectual Disabilities (DBHDID), called the Kentucky Opioid Response Effort (KORE). Awarded by the Substance Abuse and Mental Health Services Administration (SAMHSA), the purpose of KORE is to decrease overdose deaths and increase access to high quality, evidence based prevention, treatment, and recovery support services. The following projects serve justice involved members and are being implemented by various agencies throughout Kentucky state government.

Building from the lessons learned from the Reentry Pilot Program, a Community Reentry Coordination pilot program has been established by KORE to identify members diagnosed with an OUD 180 days prior to release from Kentucky state prisons and provides in reach and reentry support critical to the reintegration process. Seven In Reach Coordinators, employed by community mental health centers, provide reintegration services including in reach into select prisons, collaboration with DOC reentry staff, assessment and service planning, targeted case management, connection to peer services, supported housing and employment, and coordination with a MCO.

---

reentry coordinator who ensures that insurance is activated and preauthorization’s are managed.

Given the importance of continued access to Medication Assisted Treatment (MAT) following incarcerations, KORE has established a pharmacy based care delivery model for the administration of Vivitrol injections by community pharmacists. Partnerships between treatment providers, the DOC, and pharmacists are being established to provide Vivitrol injections, as well as naloxone and training on overdose prevention. In addition, Kentucky has also added methadone coverage for the treatment of SUD via the state plan.

Recognizing that employment decreases the likelihood of reincarceration and is often a key component of long term recovery, in partnership with the DOC, KORE has funded ten (10) Reentry Employment Program Administrators throughout the state to provide employment supports to members in recovery that are reentering their communities from correctional settings. Employment Administrators are placed at probation and parole offices to support employment and work closely with local businesses to identify safe and stable opportunities for employment.

Transportation is also a critical barrier to many justice involved members that can lead to failure to meet the terms of probation or parole and restrict access to treatment and recovery support. Recognizing this, in 2019 the DOC entered into a contract with Medicaid Non-Emergent Medical Transportation (NEMT) providers to provide transportation to SUD treatment to our probationers and parolees. The program is funded by a grant from the Kentucky Office of Drug Control Policy and is another example of Kentucky’s efforts to remove barriers and help our people succeed in treatment and recovery.

In addition to policy enhancement and improving the quality of SUD treatment services, Kentucky is engaged in state and university partnerships to bring innovative science and leverage the capacity of nationally-recognized experts in SUD treatment. Two (2) significant research grants were awarded in 2019 to address Kentucky’s opioid crisis by enhancing the system of care for members who are at high risk for opioid related overdose death. In the largest research grant ever received by the University of Kentucky (UK), researchers in partnership with the Governor’s office and Cabinet for Health and Family Services and Justice Cabinet launched a four year project through the National Institute of Health (NIH)’s HEALing (Helping End Addiction Long Term) Communities Study aimed at reducing opioid overdose deaths by 40 percent. The Women’s Justice Community Opioid Innovation Network (WJCOIN) was awarded to UK, in partnership with the Justice Cabinet and Cabinet for Health and Family Services, to enhance access to opioid use disorder treatment for women as they transition from jail back to the community.

Over the previous decade, Kentucky has taken serious steps to improve and enhance the delivery of medical and behavioral health services via telehealth. A landmark piece of telehealth legislation passed as Senate Bill 118 during the 2018 Regular Session.
That legislation required coverage of most synchronous and many asynchronous types of telehealth within the commercial insurance market and within the Medicaid program. As a result of implementing this legislation over the previous 2 years, Kentucky now has one of the broader Medicaid telehealth benefits in the country. The COVID-19 pandemic has further encouraged provider and member adoption of telehealth. DMS has also further innovated and allowed for broader use of telehealth by residential SUD providers during the current pandemic.

This telehealth adoption by Kentucky’s SUD providers creates an avenue by which many important, Medicaid quality services are now available via telehealth. Within Kentucky, many of these services would not have been available virtually from a technological or regulatory standpoint five years ago. Significantly, this opens up a major new population of members with a SUD to appropriate and effective evidence-based treatment.

**Overview of DOC and SUD Treatment Services**

The Kentucky DOC Division of Addiction Services provides substance abuse treatment services across the state through the Substance Abuse Program (SAP; see Figure 1). As part of the amendment to the 1115 Waiver, DMS is proposing that the evidence-based treatment efforts conducted through SAP be funded and expanded.

![Figure 1. Location of Kentucky's Corrections-based Substance Abuse Treatment Programs (2019)](image)

The University of Kentucky’s Center on Drug and Alcohol Research (CDAR) monitors and evaluates the jail- and prison-based SAPs through the Criminal Justice Kentucky Treatment Outcome Study (CJKTOS). Between 6/1/19 and 6/1/20, 4,639 CJKTOS treatment intakes were completed for prison and jail SAP programs. Of these, 2,665 have been discharged through the CJKTOS Client Information System. Therefore, a daily current population can be estimated at 1,974 (though this is a point-in-time estimate of members who have completed a CJKTOS treatment intake, not an average). Stimulant, cannabis and opioid use disorders represent the most prevalent SUD diagnoses among SAP clients at intake (see Table 1.)
For individuals discharged between 6/1/19 and 6/1/20 from the CJKOTS Client Information System (N=4,362), the graduation rate for jail and prison based SAP programs was 64.4%.

Begin date of 9/18/19 is based on the date CDAR began assessing SUD using the DSM-V criteria.6

DSM-V (Diagnostic and Statistical Manual of Mental Disorders)

The DOC’s Division of Addiction Services has made significant strides in expanding treatment options for members under DOC supervision over the last ten years. This expansion has included an increase of treatment slots and expansion to allow for different levels of care consistent with ASAM.

The treatment approach had been described in earlier reports and is grounded in the key components of therapeutic community modalities (De Leon, 2000).7 All of the SAP’s use a modified therapeutic community, cognitive behavior therapy, motivational interviewing, the trans-theoretical model of change, 12 step facilitation, Marlatt’s model of relapse prevention and milieu therapy. In addition, the Division of Addiction Services utilizes an evidence based curriculum, New Direction, in all of their SUD treatment services. The curriculum, developed by Hazelden Betty Ford, was selected based on its evidence of effectiveness and specialized focus on SUD and criminal justice involvement. Research shows New Directions reduces all three recidivism measures including rearrests, reconviction, and reincarceration. In addition, it received the highest rating for reducing recidivism from the Council of State Governments. Comprised of seven workbooks including introduction to treatment, criminal and addictive thinking, alcohol and other drug education, socialization, co-occurring disorders, relapse prevention and preparing for release, the curriculum allows participants to identify, challenge and replace distorted thinking to change criminal and addictive behavior. The Addiction Services’ staff participated in a three (3) day training in 2019 with the trainers from Hazelden Betty Ford Foundation to become certified facilitators and support the implementation of the intervention with fidelity.

Addiction Services has been offering MAT in the form of Vivitrol since 2016 for members that meet the clinical and medical protocol. In 2019, Addiction Services received funding through KORE to allow administration of Buprenorphine formularies (i.e., Suboxone, Sublocade) at three piloted locations; KCIW, Northpoint Training Center (NTC), and Blackburn Correctional Complex (BCC).

Addiction Services recognizes the importance of continuity of care. In 2018, a SAP aftercare specialized dorm was created for SAP graduates who were not granted parole. This dorm allows continued curriculum facilitation and additional reentry programs to prepare for release. There are plans to expand this model of treatment. In addition, all SAP participants complete an individualized aftercare plan. Once released from custody, SAP graduates are referred to Addiction Services' community staff, social services clinicians to allow for local community referrals for appropriate aftercare and recovery based supports.

Roederer Correctional Complex (RCC) is the largest institutional SAP in the state with a total client capacity of 200. In January 2016, DOC initiated family engagement sessions with the families of SAP clients at RCC who were preparing to complete the program. A collaboration of the Institution, SAP and reentry, these sessions were designed to bring the client’s support system into the facility and to have a joint information session with the client and their family. These sessions are held in the evening to accommodate a greater number of schedules and allow more families to attend. During the sessions, staff from both SAP and reentry present information for the families that includes a look at what happens in SAP, information about SUD, recovery resources for supportive family members, and what to expect on supervision with probation and parole. The families can share a meal during the session and are free to ask questions throughout the evening. Each session receives a participant evaluation and recently a survey was sent out to help identify the barriers of those families that choose not to participate.

With the success of the program at RCC, DOC plans to replicate this initiative at all of the institutions that have a SAP program in 2020. In an effort to achieve standardization, the same information will be presented and provided during all of the sessions across the state. An official start date has not been set due to the constraints of the COVID-19 pandemic and the pause of visitation at the institutions.

In concert with the family engagement sessions at RCC, some of the other institutions have initiated family visitation days where the whole family, including the client’s children are allowed to visit for an extended period of time. These visits have occurred at NTC with SAP clients and graduates and non-SAP clients at KCIW. KCIW has future plans to incorporate SAP clients into the family visitation days. During these extended visits, families engage in arts and crafts activities and share a meal together in a much more relaxed environment than exists during standard visitation opportunities. DOC plans to review these programs and determine if all of the SAP institutions could accommodate a family visitation day for the SAP participants. If replication is possible, DOC will provide the same information to all of the families that participate.
As a part of the continuum of care, DOC staff have implemented community engagement sessions that specifically target SAP graduates, their families and their additional support system. These sessions again focus on the recovery needs of SAP graduates as they reenter but also addresses the basic living needs like food, shelter, childcare and job programs. The community engagement sessions are a joint effort between the Division of Addiction Services, the Division of Reentry Services and the Division of Probation and Parole. The collaboration also calls upon the community resources to attend and be a part of information sharing to make the client’s transition more effective and remove as many barriers as possible.

**DOC’s commitment to reducing incarceration**

In Kentucky, the State legislature passed legislation that required DMS to prepare and request a waiver from the federal government to provide some services, including peer support and SUD treatment and care navigation, to Medicaid eligible incarcerated members.

In addition to expanding services and supports to improve access to high quality, evidence-based treatment for SUD, the Commonwealth has prioritized efforts aimed at diversion from incarceration with the goal of decreasing the number of members involved in the criminal justice system.

In 2011, with HB 463 the Kentucky General Assembly passed the first of several justice reform initiatives with the goal of decreasing overall incarceration. HB 463 contained several measures to reduce the number of persons with a SUD from receiving a felony conviction for possession offenses. KRS 218A.1451 instructs the court that a deferred prosecution in combination with treatment is the preferred response to a first offense possession charge. KRS 218A.275 allows the court to set aside a possession offense and void the conviction if the defendant successfully completes a substance abuse treatment program.

The progress from 2011’s HB 463 was enhanced by landmark legislation from 2015’s SB 192, referred to as the heroin bill. This bill enhanced several aspects of Kentucky’s response to the opioid crisis, including a strengthened emphasis on treatment over incarceration. Additional reforms included providing expanded access to naloxone and granting priority access to substance use treatment for pregnant women. In addition, this bill implemented and funded two new programs with the goal of reducing felony convictions for persons with SUD.

The Rocket Docket program places felony prosecutors at the district court level to rapidly assess low level felonies and place them in programs and services and the Alternative Sentencing Worker Program, operated by the Department for Public Advocacy, pairs criminal defense attorneys with Alternative Sentencing Workers. This program functions by utilizing Master's level social workers, who develop individualized treatment service plans or Alternative Sentencing Plans to present to the court in lieu of incarceration. This program allows individuals to be placed on supervised release and
participate in community based treatment avoiding costs associated with incarceration in the criminal justice system.

For about a decade, Kentucky has been attempting to expand the Pretrial Substance Abuse Program (PSAP). This specific type of program could be broadly expanded if limited Medicaid eligibility was granted to those incarcerated members with a SUD. This program offers SUD treatment to those members that are incarcerated in the pretrial stage. This program allows for members who cannot pay for bail or who have other circumstances that keep them incarcerated before trial to receive needed treatment.

PSAP is available to all 120 counties but accessed by less than 10% and in fewer than 10 counties in Kentucky. The Division of Addiction Services has focused on educating more court officials to expand the availability of PSAP to many more jurisdictions. By expanding the availability of PSAP, DOC can treat the clients in the most critical need and avoid paying for clients on a long-term basis if they were actually sentenced to serve their time for the original charges.

Section II – Demonstration Eligibility

<table>
<thead>
<tr>
<th>Expansion Population</th>
</tr>
</thead>
<tbody>
<tr>
<td>Eligibility Group Name</td>
</tr>
<tr>
<td>Incarcerated Members</td>
</tr>
</tbody>
</table>

Enrollment to Medicaid:

Reentry staff with the Department of Corrections (DOC) along with the assistors that are part of a collaborative effort between healthcare providers, local organizations, and the Commonwealth of Kentucky to provide outreach and assistance to those in need of healthcare. Assistors are assigned to the facility, and assist with applying/enrollment of Medicaid for members who qualify for the program and not currently enrolled and suspended. If a member meets program eligibility and was Medicaid eligible prior to incarceration, DOC will assist with getting suspension status changed to eligible.

For this amendment, the definition of an incarcerated member is an individual who is confined in a jail or prison, pretrial or conviction. Individuals will be Medicaid eligible incarcerated members who have a primary diagnosis of SUD. Members can be newly incarcerated or have been incarcerated for some time. Members entering a facility with a drug charge are encouraged to participate in SUD treatment while incarcerated. Currently, there are 2650 inmates participating in SUD treatment, with a waitlist of 2464. The number of inmates recommended to participate in SUD treatment but have not yet applied is 3840. The waiting list and recommended numbers are fluid and change on a daily basis.
Eligibility Criteria for incarcerated individuals:

- Adults ages 18 and over.
- U.S citizen or lawfully residing immigrant,
- Resident of Kentucky,
- Uninsured,
- Meet SUD criteria through assessment completed by DOC staff.

All SUD treatment within DOC is voluntary. Applicants that apply for treatment must meet clinical treatment requirements. Including meeting the DSM V clinical criteria for a SUD and meeting the ASAM criteria for level of care needed for the individual. Members must also meet policy specific criteria for admission including being within 36 months of parole eligibility or minimum expiration date and no disciplinary violations that would cause disruption to the therapeutic community.

Members who meet the DSM V clinical criteria for SUD and SMI are also eligible to receive treatment services in an integrated treatment program to address both mental health and SUD. This co-occurring treatment is offered for both men and women by two of the prisons, both of which utilize gender specific evidence based curriculum through Hazelden Betty Ford. In addition participants receive mental health services including medication when needed.

Members in pretrial can be eligible for SUD services. At the initial incarceration period, the jail pre-trial officer may alert the judge that the detained member admits to having a substance use problem and has preliminarily agreed to participate in treatment. If the judge agrees, they will request the Division of Addiction Services to conduct a clinical assessment to determine eligibility. After the assessment, eligibility can be determined.

Pretrial eligibility:

- Having a confirmed SUD diagnosis,
- Being in custody in a county jail for pending charges,
- Having no felony convictions (in any state) within the past 10 years,
- Not currently being on probation or parole, must not be charged with a Class A or B felony, or a sexual offense under KRS 17.500, and
- Currently charged with an offense under KRS 218A or another offense and has a record of recent/relevant substance use.

Upon an agreement between the judge, the commonwealth attorney, the client in question, and their attorney, successful completion of a jail based six month treatment program may serve as an alternative to a felony conviction.

</tr>
<tr>
<td>MCO Selection</td>
</tr>
</tbody>
</table>

The following services are being requested:

A. Two new bundled service codes would need to be created.

1. SAP weekly bundle to include: the initial assessment, member therapy, group therapy, family therapy, peer support services and service planning.

2. Recovery supports weekly bundle after the completed of SAP to include the above listed services. Supporting Others in Active Recovery (SOAR) is the recovery support program.

B. Medication management services would be outside of the bundle along with the medication used for MAT. The medications used are Vivitrol, Buprenorphine 2/5, Buprenorphine and Sublocade and, if available, their generic forms.

The Substance Abuse Medication Assisted Treatment (SAMAT) Program Administrator will compile a list of SAMAT eligible candidates on a monthly basis. This eligibility list will be distributed to SAP Program Administrators at each institution and county.
jail. Upon receipt of this list, SAP clinical staff will further screen candidates for eligibility and agreement for participation. If an eligible candidate is considered clinically appropriate for SAMAT, a referral will be made to the Institutional Health Services Administrator or Jail Medical Authority. The medical department will continue screening per the SAMAT Protocol and determine if the candidate is medically appropriate. When an eligible candidate has agreed to participate and is found to be both clinically and medically appropriate for SAMAT, the onsite medical provider will order medication (Buprenorphine, Sublocade, and Vivitrol) directly through DOC’s contracted pharmacy. Monthly, the Health Services Administrator or designee will notify DOC’s contracted pharmacy for members that were prescribed medication for SAMAT.

DMS proposes delivery services to this population as follows:

A member will receive a bio-psychosocial assessment at the time of incarceration. Different treatment options would then be offered. Treatment options include: member, family and group therapy, peer support services and MAT of their choice that is determined clinically and medically appropriate. In addition to treatment, members can be involved with service planning and case management.

Members will be covered by Fee-For-Service (FFS) Medicaid during incarceration, then they will be enrolled with an MCO an average of thirty (30) days prior to release. The member with the assistance of the Reentry Coordinator will choose the MCO that would best suit their needs. The MCO will then work with the member to set up continued treatment after release.

An assistor or reentry coordinator will contact DCBS with the member’s choice of MCO and the system would then switch the member from fee for service to the MCO. The MCO care coordinator would then meet with the member and reentry coordinator to complete an assessment of what the member needs to go back into the community successfully. No additional capitation rate would be given to the MCO. The goal of this process would be when the member is released, APPRISS would alert the Medicaid system that the member has been released from incarceration, therefore continuing the activation of the member’s benefits.

The released member would have a detailed discharge plan outlined below:

- The MCO will conduct care coordination services by working closely with the member. Care coordination would include an assessment to determine the needs of the member after release. An integrated discharge plan that will identify the medical, behavioral health and social needs to support the member’s return to the community. Also include assessing risks, such as medication compliance; and assessing needs and providing recommendation for access for specialized supports including but not limited to: medication support, housing, employment, physical health needs, behavioral health and SUD treatment needs by assisting with selection of available community treatment providers.
- Determine what referrals need to be made.
• Schedule appointments with physical and behavioral health providers.
• Provide referrals to other services.

DMS is proposing to cover 5300 slots in the first year for the SAP program. We propose a weekly bundle payment for 10 clinical treatment services a week. For the Supporting Others in Active Recovery (SOAR) program we propose to cover 270 slots in the first year and a weekly bundled payment for seven clinical treatment services a week.

For the demonstration, the following slot allocations will be covered in the SAP program.

<table>

Rate Development:

As stated above, we are proposing a weekly bundle for billing once a week. The rate being proposed was developed based on the 10 hours of service a week, the level of practitioner performing the service and consulting our current rate for services. For the SAP program the proposal is a weekly bundle payment of $112.00/week. For the SOAR program the proposal is a weekly bundle payment of $90.00/week. These bundled services will be billed by DOC on a weekly basis.

Medication:

DMS Pharmacy has recognized that there is operational viability to providing pharmacy benefits to incarcerated members with an SUD enrolled in Medicaid. The DOC contracts with the pharmacy to provide prescription drugs to incarcerated members. After enrolling in Kentucky Medicaid’s FFS program, these members will be identified by the DOC as exempt from their normal prescription drug services. DOC will work with its
contracted pharmacy to provide a member file containing Medicaid enrollment data. DOC’s contracted pharmacy and the physicians treating the incarcerated Medicaid population will need to enroll with the Kentucky Medicaid program. DOC’s contracted pharmacy will be responsible for billing Kentucky Medicaid’s FFS program for reimbursement of the prescription products under the waiver. Billing will only apply to medications for MAT. Once members are enrolled in Medicaid FFS, their pharmacy benefit will align with the preferred drug list and utilization criteria established by DMS. These are subject to change as we review the pharmacy benefit on a continual basis and coverage determinations are realigned.

Section V – Implementation of Demonstration

Upon approval of the SUD Continuity of Care for Incarcerated Members amendment application, DMS will create within our provider enrollment branch a new provider type specific for the DOC. DMS along with DOC partners, Office of Inspector General (OIG) and the Department for Behavioral Health, Developmental and Intellectual Disabilities (DBHDID) are working to develop a specific definition of programming provided for incarcerated members within the existing Alcohol and Other Drug Entity (AODE) license. This licensure will be required in order to enroll as a Medicaid provider.

When incarcerated members qualify for the SAP and/or SOAR program, reentry staff with DOC will assist with applying/enrollment of Medicaid. If a member meets program eligibility and was Medicaid eligible prior to incarceration, DOC will assist with getting suspension status changed to eligible.

Eligible beneficiaries would fall under FFS while receiving SUD treatment during incarceration and then transition to the beneficiary’s MCO of their choice to include care management and coordination to develop a release care plan, referrals made to and appointments scheduled for physical and behavioral health providers and linkages to other critical social services and peer supports. There will be no cost sharing requirements for members who are incarcerated receiving SUD treatment per this demonstration.

Evaluation

Hypothesis 1: With the approval and implementation of this amendment, recidivism will be reduced among Medicaid beneficiaries who receive Medicaid matched SUD treatment.

<table>
<thead>
<tr>
<th>Question</th>
<th>Example of Measures</th>
<th>Data Source</th>
</tr>
</thead>
<tbody>
<tr>
<td>Was there a decrease in re-incarceration rates among those who receive Medicaid matched SUD treatment?</td>
<td>Number and percent of members who receive Medicaid matched treatment with a re-incarceration.</td>
<td>DOC</td>
</tr>
</tbody>
</table>
**Hypothesis 2:** With the approval and implementation of this amendment, the provision of Medicaid-matched SUD treatment will increase the likelihood of enrollment and enrollment continuity following release.

<table>
<thead>
<tr>
<th>Question</th>
<th>Example of Measures</th>
<th>Data Source</th>
</tr>
</thead>
<tbody>
<tr>
<td>What is the likelihood of enrollment continuity for those who receive Medicaid-matched SUD treatment compared to other members with SUD who do not receive Medicaid-matched SUD treatment during incarceration? What is the median length of time prior to Medicaid activation following release?</td>
<td>Number and percent using SUD community-based treatment services before and after this amendment.</td>
<td>Medicaid Management Information System (MMIS)</td>
</tr>
</tbody>
</table>

**Hypothesis 3:** With the approval and implementation of this amendment, the provision of Medicaid-matched SUD treatment will improve health outcomes following release.

<table>
<thead>
<tr>
<th>Question</th>
<th>Example of Measures</th>
<th>Data Source</th>
</tr>
</thead>
<tbody>
<tr>
<td>Are re-incarceration rates among beneficiaries who receive Medicaid-matched SUD treatment during incarceration lower than members with SUD who do not receive treatment?</td>
<td>Number and percent of Medicaid beneficiaries with a re-incarceration before and after this amendment.</td>
<td>DOC</td>
</tr>
<tr>
<td>Is utilization of SUD treatment post incarceration increased among beneficiaries who receive Medicaid-matched SUD treatment during incarceration compared to those members with SUD who do not receive treatment? Others?</td>
<td>Number and percent using SUD community-based treatment services before and after this amendment.</td>
<td>MMIS</td>
</tr>
</tbody>
</table>

**Section VI – Demonstration Financing and Budget Neutrality**

In order to finance coverage, Kentucky is proposing to determine budget neutrality by looking at per member per month cost of SUD residential treatment. DMS is looking at incarcerated member’s treatment as an inpatient/residential treatment service. As stated earlier we are proposing coverage of treatment for incarcerated members based on slots. The below chart shows our total cost for each of the two programs, the programs combined and our comparison of SUD residential treatment costs.

Section VII – List of Proposed Waivers and Expenditure Authorities

The state seeks waiver authority to receive federal matching on costs not otherwise matched for services rendered to members who are incarcerated.

Section VIII – Tribal Notice & Public Notice

Tribal Notice

Kentucky does not have any tribal units.

Public Notice

In accordance with 42 CFR 431.408, the Cabinet for Health and Family Services (CHFS), Department for Medicaid Services (DMS) announces its intention to file an 1115 Amendment Application with the Centers for Medicare and Medicaid Services (CMS) no later than November 1, 2020, requesting Medicaid coverage for SUD services to incarcerated individuals. The changes outlined below will become effective upon CMS approval.

Kentucky is requesting approval from the Centers for Medicare and Medicaid Services (CMS) for an amendment to its Medicaid Substance Abuse Disorder (SUD) 1115 waiver to authorize federal Medicaid matching funds for the provision of SUD treatment to eligible incarcerated individuals. Coverage for these services is requested for persons incarcerated in state and county facilities. Currently, the Department of Corrections provides Substance Abuse Program (SAP) services that are offered to incarcerated individuals. Kentucky wants to enhance and expand these services offered to incarcerated individuals.

The objective of the amendment will be twofold: First, to provide SUD treatment to eligible incarcerated individuals in order to ensure this high risk population receives needed treatment before release, and to strengthen follow up care with a Medicaid provider after release by paying for SUD treatment while incarcerated; and to allow the recipient’s chosen MCO to coordinate aftercare with a Medicaid provider 30 days before release.

Public Comments

Copies of this notice are available on the DMS website: https://chfs.ky.gov/agencies/dms/Pages/default.aspx

Notices are available in the following news publications: Louisville Courier-Journal, Lexington Herald-Leader and the Cincinnati Enquirer.

In addition, DMS will hold 2 Virtual Town hall Meetings on the following dates: October 12, 2020 at 10:00 AM EST & October 26, 2020 at 2:00 PM EST.
Join Zoom Meeting: [https://zoom.us/j/95486102544](https://zoom.us/j/95486102544)
