

The National Strategy for the COVID-19 Response and Pandemic Preparedness recommends that regular COVID-19 testing is a “key component” of the national plan to safely reopen schools. The Kentucky Department of Health recommends Covid-19 testing for students in K-12 schools.

- Students can have COVID-19 without any symptoms but can still spread the infection to other students.
- Testing in K-12 schools can identify students who are infected and need to isolate at home to protect other students from getting COVID-19.

Your school can't afford to let fears and anxiety around COVID-19 be the reason students, faculty and staff don't return to school. Together with LabTox, schools can provide safe, in-person learning. LabTox has experience with quickly and efficiently conducting large volume COVID-19 diagnostic tests for students, faculty, and staff. LabTox has implemented testing programs in schools and universities across the country including Eastern Kentucky University, Hanover College, Sayre School, and many more.

What we offer

- LabTox can guarantee the Covid-19 PCR diagnostic test kit supply you need to test your entire population including all students grades K through 12, faculty and staff. We also provide the collectors.
- Results are provided to school administration and individual test-takers within 24 hours of lab receipt of test.
- Schools will establish a regular testing schedule based upon consultation with a dedicated LabTox representative.
- Testing can be implemented immediately.
- Tests are designed to be easy and gentle for students. We offer the following collection methods: nasal swab, oral swab and saliva
