WE'RE NOT JUST YOUR LAB, WE'RE PART OF YOUR TEAM

You, your experienced leadership team, and staff make sure your students are placed in the best situation possible to be successful. In these unprecedented times, your back-to-school team is not complete without a lab partner that you can trust to deliver accurate, timely results. Providing precise, high-quality care requires a team effort and we take that responsibility very seriously. Founded in 2012, Lexar Laboratories is a female owned, CAP accredited, clinical laboratory. Lexar is well known in the community for our ongoing COVID testing support of hospitals, clinics, surgery centers and employers. We have consistently provided same day results to our clients for nearly two years, resulting thousands of tests per day. Our success is predicated on four core focus areas: Service, Trust, Integrity and Accuracy. Together, we will ensure that your students and staff are fully supported, as we continue to navigate these unchartered waters.

Resources Needed at Your School Campus:

The resources needed will vary based on your individual campus. We can accommodate a wide variety of test collection formats and I will be happy to discuss those with you based on your particular needs.

Specimen Collection Team:

Lexar Laboratories will provide a qualified team of technicians to perform specimen collections at your campus based on your specific needs.

Testing Format(s):

We will work closely with your leadership team to develop a testing format for any number of situations. This may include initial testing prior to classes beginning, outbreak testing, scheduled testing based on your recommendations, etc.

Thank you for your consideration of Lexar Laboratories, we look forward to speaking with you soon!
