MIRIMUS

Mirimus Clinical Labs

760 Parkside Ave, Suite 206 Brooklyn NY, 11226 929-377-3744

About the Company: Mirimus is dedicated to the mission of delivering low-cost, high-quality, scalable PCR testing to facilitate regular Covid-19 screening and allow schools and other organizations to reopen safely. We have tested over 2.5 million samples over the past 18 months, working with schools across more than 30 states.

Mirimus performs onsite collection events for saliva and nasal swab samples, but we designed our Flexible Pre-Scanned Method as the optimal strategy for in-school Covid-19 testing, with the least administrative burden possible. This approach eliminates the need to disrupt class to collect samples and has been implemented successfully across schools in New York State, New Jersey, and Virginia. The process works as follows:

• Mirimus works with the school to obtain consent forms from participants

• Mirimus prepared pre-labeled collection kits, grouped by homeroom class or as otherwise designated

• School personnel distribute and collect kits from participants and send them out for shipment

• Mirimus scans in samples and processes tests, with results within 24 hours of receipt

Point of Contact: Nejla Katica David Eads

Services Offered: Surveillance/Screening Covid-19 Testing

Episodic (Outbreak) Pool Testing

Periodic (Scheduled) Mass Testing (routine)

Counties served: For Flexible Pre-scanned Method: All counties served

For Onsite Administration Method: Service area depends on number of samples to be collected.

Resources needed at site: Flexible Pre-scanned Method only requires a UPS drop off location.

Onsite Administration Method:

- Collection area with option for indoor collection in inclement weather
- Table and 3 chairs
- Power outlet and WiFi connection
- Trash container

Onsite Testing Teams: Depends on volume, but assuming 100 samples to be collected:

3 Collection Staff, with background checks performed and with experience collecting samples in school settings

Testing Timelines:

Sample Minimums: 5 samples for Pre-Scanned Method, approx. 50 samples for Onsite Method

Results reported: 24 hours from receipt at lab (roughly 36 hours from collection)

Onboarding: Two weeks before first testing period

Tests performed: Monday through Saturday
