## II. DISEASE SUMMARIES

- AIDS 11
- Campylobacteriosis 15
- Chlamydial Infections 17
- Cryptosporidiosis 20
- Ehrlichiosis 21
- Encephalitis, Arboviral 22
- Escherichia coli O157:H7 25
- Gonorrhea 27
- Haemophilus influenzae 30
- Hepatitis A 32
- Hepatitis B 34
- Hepatitis C 37
- Histoplasmosis 39
- Influenza 41
- Legionellosis 44
- Listeriosis 46
- Lyme Disease 47
- Malaria 49
- Meningococcal Disease 50
- Pertussis 52
- Q Fever 55
- Rabies 56
- Rocky Mountain Spotted Fever 58
- Salmonellosis 60
Shigellosis 63
Streptococcal Disease, Invasive Group A 65
Streptococcus pneumoniae, Drug-Resistant Invasive Disease 67
Syphilis 68
Tuberculosis 71

Diseases of Low Frequency 74
INTRODUCTION

The Division of Epidemiology and Health Planning is pleased to release this surveillance summary of reportable diseases in Kentucky. This publication will offer valuable information about disease incidence to readers throughout the health and human services community. Only data on cases that are reported to the Division of Epidemiology and meet the confirmed status category for a case definition are included in this summary, except where specifically noted.

Kentucky was part of the nationwide West Nile Virus outbreak. The state participated in West Nile virus surveillance, documenting West Nile virus cases in 7 of the 15 Kentucky Area Development Districts with 14 confirmed human cases.

Cases of most vaccine preventable diseases remained low. Most notable was an increase in pertussis cases and a greatly increased influenza activity compared to the prior year.

Q Fever, added to the reportable list in 2000, presented with nine cases and two cases of Tularemia were reported.

We acknowledge the contribution of the local health departments’ surveillance personnel and of all the physicians, hospital infection control personnel and medical laboratory personnel who have reported cases as required by statute. We remain committed to the timely dissemination of our findings to all who are partners in disease prevention.
