Diabetes, Smoking, and Your Health

Smoking has severe effects on your diabetes and your health. When you quit smoking, you can have more energy, a longer life, better control of your diabetes, and less chance of a heart attack or stroke.

Call Kentucky’s Tobacco Quit Line – it’s Fast, it’s Free, and it’s Easy:
1-800-Quit Now or 1-800-784-8669

Eyes
Smoking can make vision problems worse which can lead to blindness.

Nerves
Smoking raises your risk of nerve damage. This can cause numbness, pain and problems with digestion.

Feet & Legs
Smoking can lead to serious foot and leg problems like infections, ulcers, and poor blood flow. Smoking raises your risk of amputation.

Kidneys
Smoking triples your risk of getting kidney disease. Drugs that help prevent kidney failure don’t work as well for smokers.

Heart
Smokers with diabetes are 11 times more likely to have a heart attack or stroke than people who don’t have diabetes and don’t smoke.

Blood Sugar
Smoking raises your blood glucose (sugar) and reduces your body’s ability to use insulin, making it more difficult to control your diabetes.

Teeth
Smoking raises your risk of getting gum disease and losing your teeth.

Cholesterol
Many people with diabetes have high levels of cholesterol. Smoking makes this worse by increasing build up on artery walls, putting you at more risk for heart attack or stroke.

Eyes
Smoking can make vision problems worse which can lead to blindness.

Nerves
Smoking raises your risk of nerve damage. This can cause numbness, pain and problems with digestion.

Feet & Legs
Smoking can lead to serious foot and leg problems like infections, ulcers, and poor blood flow. Smoking raises your risk of amputation.
