

## State of Kentucky Addendum to the Envision Local Implementation Guide Kentucky Immunization Registry - 2016

The Kentucky Immunization Program requires the use of a free testing tool prior to beginning testing with the immunization program on-boarders to expedite the testing process. While you are waiting to test, please use the NIST Tool to vet messages: <http://hl7v2-iz-testing.nist.gov/mu-immunization/> and apply the corresponding corrections. (Note: this tool does not cover all aspects of the testing immunization program performs, but it will help speed up the testing process.

Table 1. KY Addendum to the WebIZ Immunization Information System HL7 2.5.1 Release 1.5 Local Implementation Guide Document Version 3.5

Segment	Element Name	Registry System Usage	Code Tables / Notes
MSH- 6	Receiving Facility	R	Since the Immunization Registry covers the <i>Jurisdiction</i> , the only appropriate Receiving Facility codes is : KY0000
RXA-10	Administering Provider	R	This shall be the WebIZ user (Provider) who administered the immunization. The Immunization Registry System will interpret the Unique ID (first component) of this field in the incoming message as the person's NPI (National Provider Identifier). If this matches a user within the Immunization Registry System associated with this clinic, then this user will be indicated in the Administered By field for the immunization. If a match cannot be found, the Immunization Registry System will return a warning but will continue to process the incoming message and will enter the prefix, name, and the suffix into the vaccination comments field.
RXA-11	Administered At Location	R	The first component contains the location at which the vaccine was administered (if applicable). The default (null) value is the current census location for the patient. Site specific table. This first component has the same form as <i>PV1-3-assigned patient location</i> . The second component can be used to specify an address. This could be used to fill mail orders to a patient or provider, or to account for home health care.  RXA-11.4 has truncated address in all reviewed messages which may be clinic address, but is not complete and recognized by Postal Codes. For incoming messages, the Immunization Registry System has been updated to accept HL7 Facility Codes (in component 4 of this field) to identify the administering immunization provider if it is different than the sending facility code (MSH-4) in the case of HIE, Hubs, etc.
